WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two, a left and a right: the same outline, countersunk on opposite faces. Cut from 6 mm steel plate by jigsaw or a local cutting shop to the yoke layout picture: a 40 mm radius hub, a 60 mm wide arm 267.5 mm to the stand-off holes, and a fan from 125 to 175 mm radius.

Axle hole 20.5 mm at the hub centre, reamed smooth.

Lock slot 11 mm wide on a 140 mm radius, from the arm's line round 75 degrees toward the fan's far edge.

Drop pin holes: eleven 8.5 mm on a 163 mm radius, the first on the arm's line, then every 7.5 degrees along the slot.

Stand-off holes: two 9 mm, 30 mm apart, countersunk 90 degrees on the outer face so the M8 heads sit flush.

Fit: the outer face runs on the PTFE washer by the axle plate.

Check: laid back to back, the two plates match all round.
